You will need to add a path for the database.

```
497
498    if __name__ == "__main__":
499        database = r"C:\\db\time_tracking.db"
500        main()
501
```

Add a folder to C drive named "db"

In that folder make a new file named "time_tracking.db"

Copy the highlighted portion and insert in code for database
